# Advanced and Applied Convergence

**2nd International Joint Conference, IJCC 2016  
Hanoi, Vietnam, January 18-22 2016  
Revised Selected Papers**

The Institute of Information Technology and Control, Vietnam Academy of Science and Technology

International Partnership for Advanced Technology

<b>A Novel Credit Scoring Prediction Model Based on Dynamic Recursive Feature Elimination and Parallel Random Forest</b> Van-Sang Ha, Bao-Hien Nguyen Thi, Ngo-Thi-Thu-Trang, GyooSeok Choi	91
<b>Using Ant Colony Optimization Algorithm For Traffic Routing</b> Lu Dang Nhac, Nguyen Ha Nam, Gyoo Seok Choi	95
<b>Gold Nanoparticle Based Plasmon Microwave Antenna</b> Dang Thi Thanh Thuy, Nguyen Khac Thuan, Hoang Nam Nhat	99
<b>Investigating The Performance of Expert System in a Multistage System for Automatic Detection of Epileptic Spikes</b> Anh-Dao Thi Nguyen, Duc-Tan Tran, Nguyen Linh-Trung	102
<b>Congestion Control Algorithms Evaluation of TCP Linux Variants in Dumbbell Networks</b> Ahmad Mateen, Muhammad Zaman	108
<b>Performance Analysis of TCP Variants using AQM and ECN</b> Ahmad Mateen, Adnan Anwar	109
<b>Effective Internet Traffic Management by Reducing Congestion in TCP Cubic Through Proactive Approach</b> Ahmed Matin, Jawad Ahmad, Amara Nawaz	110
<b>Comparison of Various Image Fusion Methods for Impervious Surface Classification From VNREDSat-1</b> Hung V. Luum Manh V. Pham, Chuc D. Man, Hung Q. Bui, Thanh T.N. Nguyen	120
<b>Field Informatics: Application Of ICT To Environment Management and Monitoring</b> Bui Quang Hung, Nguyen Thi Nhat Thanh, Nguyen Hai Chau	125
<b>Air pollution mapping from high spatial resolution satellite images: a case study in Hanoi</b> Hung V. Luu, Chuc D. Man, Ke C. Luong, Hung Q. Bui, Thanh T.N. Nguyen	130
<b>Object-based classification for mapping land-cover using VNRedsat-1 Image</b> Pham Ngoc Hai, Pham Van Cu, Dinh Thi Dieu, Huynh Thi Anh Van, Tong Thi Huyen Ai, Pham Van Manh, Bui Quang Hung	135
<b>How to extend an Traditional Medical Process Modeling</b> Chae-Yun Seo, Yu-Jin Lee, R.Young Chul Kim	140
<b>Design of an OSD(On-Screen Display) Integrated Module to handle Multimedia transmitted from Multiple Sources</b> Byungchul Lim, Yeonchun Jung, Jinhjung Park, Byungkook Jeon	143
<b>Modeling a Photovoltaic Monitoring System based on Maintenance Perspective for New &amp; Renewable Energy</b> Hyun Seung Son, R. Young Chul Kim	144
<b>A Model of Geofence to provide Context-Awareness for the IoT(Internet of Things)</b> Young-Hyun Eom, Young-Keun Choi, Jinhjung Park, Byungkook Jeon, Sungkuk Cho, Byungchul Lim	148
<b>Pedestrian's Signal Mechanism through Smart Traffic System centered on the vehicle</b> HyeonJun Lee, R. Young Chul Kim	150
<b>An Automatic Visualization Mechanism of extracting Diverse Unit Level for Software Complexity</b> Junsun Hwang, R. Young Chul Kim	155

# How to extend an Traditional Medical Process Modeling

## **Abstract**

*In this paper, the traditional medical engineering focused on the Medical Process Modeling, which is modeled with two ways such as Activity Centric Approach and Artifact Centric Approach. Most of medical systems focus on Disease Centric Medical Process. There are also difficult to develop and manage an efficient medical system. To solve this problem, we suggest to map medical process modeling with business process framework, which consists of five layers based on a closed architecture.*

*Keywords: Business Process Modeling, Medical Process, Closed Architecture*

## **1. Introduction**

Recent development of medical information technology has significantly affected with the way how a healthcare industry operates. Medical information systems have advanced from Electronic Health Record solutions to sophisticated clinical decision support systems and clinical pathways management systems. While the former are usually rely on Evidence based machine learning and hypothesis generation, the latter is mostly based on workflow technologies, originating from Business Process Modeling (BPM)[13]. To adapt very quickly changing or new business, an enterprise needs to be provided with a business integrated system.

Most enterprises have a computer system to efficiently operate systemic information, and also to appropriately preserve/manage it based on closed layer architecture [1]. This architecture is based on the layer mechanism which directly accesses information under the layer. Seo and Kim[4] suggested and defined five layer structure based on the closed architecture. Seo[6] also suggested to reuse the existing software component for reducing development time and cost with mapping CBD(component based development) and BPM(Business process modeling)[2].

This paper, describes as follows: it mentions related work in chapter 2, shows a based on Medical Process Framework in chapter 3, describes a case study in section 4, and finally conclusion.

## **2. Related Work**

In this paper, the layer structure may be improved on BPF(Business Process Framework). Figure 1 shows Business Process Framework. This chapter presents a proposed closed architecture of 5-layers. Figure 2 is 5-layer based on closed architecture. Business rule layer is constraints before running process [8]. Business process layer is a step for a certain goal and a concrete activity procedure [10]. Service layer can combine services for easily replacing about business requirement changes [12]. A service may become running of an application [7]. Component layer is a dynamic workflow for developing a service [3]. Data layer is physical data storage. Entire data is stored as a table.

Figure 1. Business Process Framework

For a developer side, although customer requirements are frequency change, it modifies a process, a service, a component, data with mapping customer's requirement. There changes business requirement easily [6]. After developing the system, it is easy to manage the system whenever a business requirement is changed.

### 3. Medical Process Framework

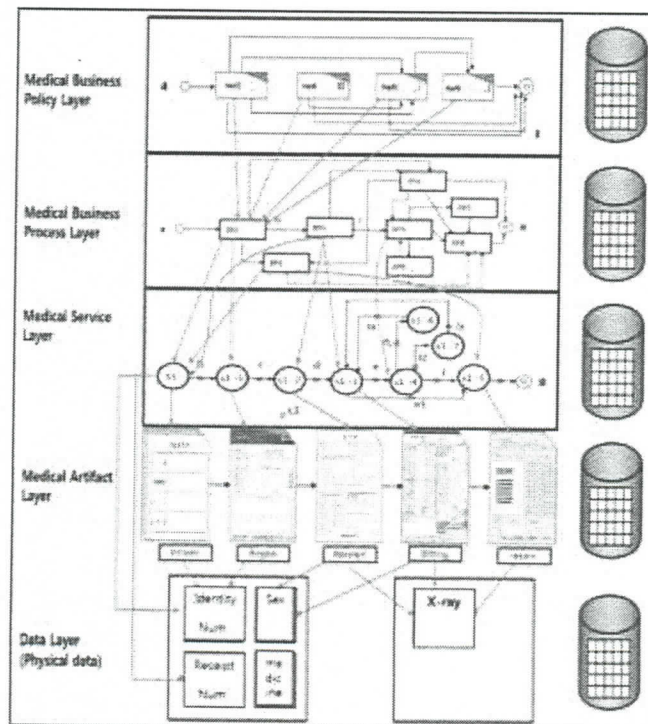

Figure 2. Medical Process Framework

Our medical process framework is based on 5-layers. Medical policy is placed in top of 5-layers [13]. There are constraint of medical policy. Medical process layer is medical business process. There are services for a medical business process or business processes. Service layer is consisted of variable services for executing a process. Data layer are physical data storage and non-formal storage.

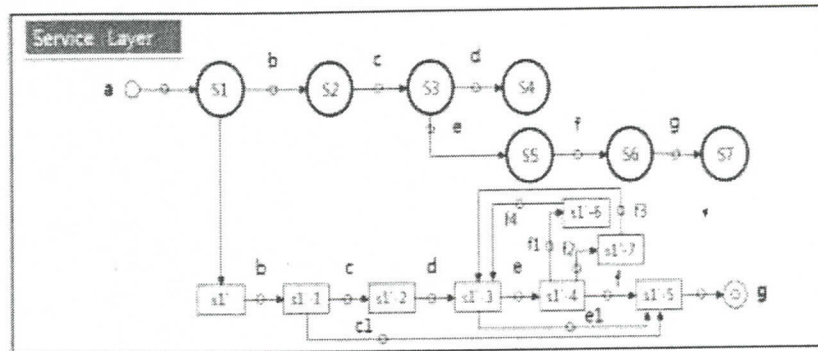

Figure 3. Medical service layer

Figure 3 shows medical service layer of medical process framework.

#### 4. Conclusion

Medical Business Process Framework based on closed architecture. Most of medical systems focus on Disease Centric Medical Process. There are also difficult to develop and manage an efficient medical system. We suggest to map medical process modeling with business process framework, which consists of five layers based on a closed architecture.

## **Advanced and Applied Convergence Letters**

The AACL series is committed to the publication of proceedings of Advanced and Applied Convergence. Its objective is to publish original researches in various areas of Smart Convergence. This will provide good chances for academia and industry professionals as well as practitioners to share their ideas, problems and solutions relating to the multifaceted aspects.

Research papers were strictly peer-reviewed by program committees to make sure that the papers accepted were high quality and relevant to the current and future issues and trends in Advanced and Applied Smart Convergence.

The scope of AACL includes the entire area of advanced and applied convergence from the current and future trends. The language of publication is English.
